

Trekker™

Turn your
Trekker into a
fully equipped
PDA

"It gets me where I'm going."

"Before leaving on a trip, I can check out the city I am going to using the Browsing Offline mode. Trekker informs me about restaurants, stores, museums, etc. near my hotel. I can record voice memos to remind myself of a restaurant a friend mentioned not to miss, among other things.

Once I hit the sidewalk, the magic of GPS goes to work. Trekker keeps me apprised of points of interest, names of streets, intersections... to the point where I no longer have to stop and ask people where a place is. The "Where Am I?" feature helps me identify my position, the name of the street I am on and the approximate address.

Trekker has truly revolutionized my independence while traveling."

— Andre Dubois, Technical Advisor

With Maestro applications, Trekker becomes a versatile PDA with an agenda, text/voice memos, address book, DAISY reader (Victor Reader Pocket), media player, E-mail manager, and more.

Expanding
the Freedom
to Explore

The Wireless
Generation

GPS: Leading the Way

Through the increasingly precise power of GPS, Trekker users can pinpoint their location anywhere in the world and get to where they are going. They will also feel more connected to their surroundings, learning about nearby attractions and other points of interest.

Trekker's palm-size system offers greater freedom, increasing the confidence of the blind and visually impaired while traveling near or far.

Trekker Seamlessly Integrates into Everyday Life

Sleek and discreet, Trekker helps guide the visually impaired through their environment. Rather than replacing white canes and guide dogs, it enhances their efficiency, providing information as naturally as possible and enabling users to record their own voice and text memos.

Featuring...

- **Real-time information**
Announces streets, intersections, addresses and stores as you come to them.
- **On/offline Map Browsing**
Virtually tour an area before visiting it.
- **Route planning and recording**
Create your own itinerary.
- **Flexible level of vocal information.**
- **Vocal Point of Interest creation**
Allows you to create your own point of interest.
- **Access to GPS status information**
- **Motorized mode**
Use Trekker in a moving vehicle.
- **Route mode**
Trekker creates an itinerary based on an entered address.
- **Free mode**
Receive and enter information away from street networks
- **Tactile keyboard**
For easy data entry and instant function access.

Plus...

- **Enhanced input efficiency**
Enter text in Grade 2 Braille, or use an external Bluetooth QWERTY or Braille keyboard.
- **PC navigation standards**
Its PC-based interface and standard commands enable you to read real-time directions and search for points of interest more efficiently.
- **GPS Maps**
A wide variety of maps can be purchased by phone and downloaded online or shipped on CD or Compact Flash cards.

The Wireless Generation

No more restricting wires... Trekker has gone wireless, making it easier to wear and adapt to your own needs.
